Cicame Energie offers you the expertise of a passionate, competent and professional team!

**YOU HAVE A PROJECT?
WE CAN HELP YOU TO GET IT DONE...**

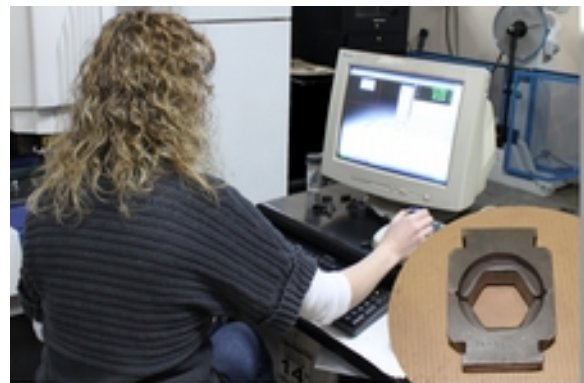

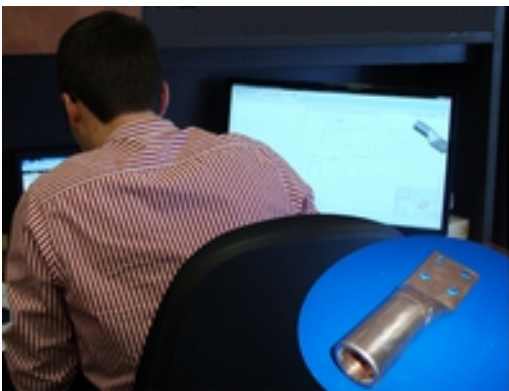

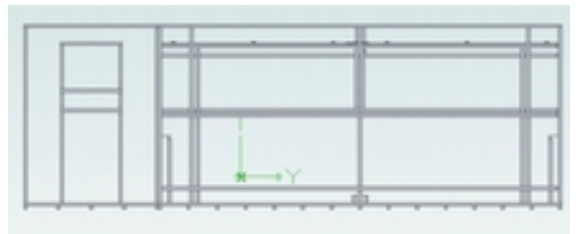

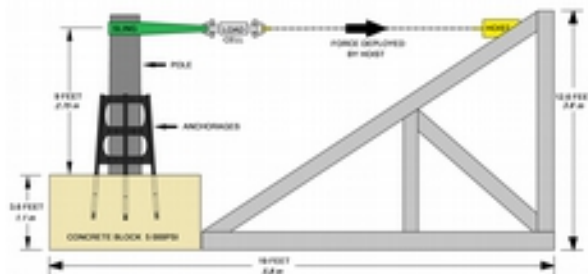

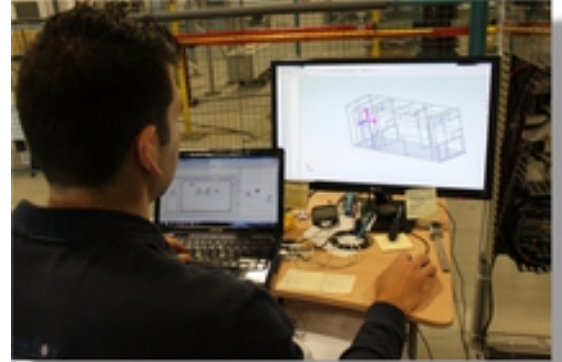

Our team, composed of 15 **multidisciplinary** engineers, offers you its expertise and competences in mechanics, electricity and metrology. We will guide and advise you in any of your projects...

An infinite power of creation!

We will support you all along your projects : identifying your needs, developing a complete solution, following-up.
We offer you a wide range of R&D services fully customizable to meet all your needs.

We imagine and design our **own tests laboratories**, according to the needs; therefore, we can implement any test, even very specific ones.
Our testing equipments are designed to respect international standards but we can adapt to your specific demands, if needed.

A wide range of testing equipments available, which allows us to develop and test our own products.

Custom designs

ENGINEERING

We develop and manufacture class 1, 2 & 3 connexion elements in aluminium, copper or steel: anchoring, joining sleeves, repairing sleeves, T joining, lugs for conductors (ACSR, ASC and ACCR), etc... Our POLTEC product line provides utilities as well as construction companies with pole line hardware and input electrical accessories. With our european partners, we can also provide complete connection solutions to meet your needs and technical demands in overhead and underground distribution, transmission and security.

MANUFACTURING

Our important manufacturing capacity can adapt to your drawings or the ones we will create for you. We own several NC manufacturing centers and NC turning machines (numerically controlled) as well as conventional machines and a plasma cutting machine.

We keep in stock enough copper, aluminium and steel to be able to meet all your demands even the most urgent ones.

TECHNICAL ASSISTANCE

Our engineers will be pleased to advise you on product choice according to your applications as well as on their use, maintenance and stock.

They can meet you directly at your work place in order to offer you the most appropriate solutions to your specific needs.

(for instance: electrical facilities security)
